Consumer Expenditures for the Chicago Metropolitan Area: 2013-14

Households in the Chicago-Gary-Kenosha, Ill.-Ind.-Wis., metropolitan area spent an average of \$60,915 per year in 2013–14, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Charlene Peiffer noted that this figure was significantly higher than the \$52,284 average expenditure level for households in the United States. Chicago-area households allocated their dollars similarly among most of the eight major categories, with only two differing significantly from the U.S. average. For example, the share of expenditures for transportation, which accounted for 15.2 percent of the average household’s budget in the Chicago area, was significantly lower than the national average of 17.3 percent. (See [chart 1](#) and [table 1](#).)

Highlights of the Chicago area's 2013–14 spending patterns:

- **Housing:** This was the largest expenditure category for Chicago-area households and averaged \$21,389. Housing accounted for 35.1 percent of the area's household budget, significantly higher than the 33.4-percent U.S. average. (See [table 1](#).) Among the 18 metropolitan areas nationwide for which data were available, Chicago was 1 of 8 areas to have a housing expenditure share which was significantly higher than the national average. Housing expenditure shares among the 18 areas ranged from 39.6 percent in New York to 30.2 percent in Detroit. (See [table 2](#).)
- **Transportation:** As noted, 15.2 percent of a Chicago-area household's budget was spent on transportation, significantly below the national average of 17.3 percent. Of the \$9,237 in annual transportation expenditures in Chicago, 91.0 percent was spent buying and maintaining private vehicles; this compared to the national average of 93.8 percent.
- **Food:** The portion of a Chicago household's budget spent on food, 12.7 percent, was not significantly different from the 12.8-percent U.S. average. Chicago-area households spent \$4,784, or 61.6 percent, of their food dollars on food prepared at home and \$2,976 (38.3 percent) on food prepared away from home. In comparison, the average U.S. household spent 59.5 percent of its food budget on food prepared at home and 40.5 percent on food prepared away from home.

Additional Information

Data in this release are from the Consumer Expenditure Survey (CE), which the U.S. Census Bureau conducts for the U.S. Bureau of Labor Statistics. The data in this release were averaged over a 2-year period, 2013 and 2014.

A household in the CE survey is defined as a consumer unit which consists of members related by blood, marriage, adoption, or other legal arrangement; a single person living alone or sharing a household with others but who is financially independent; or two or more persons living together who share responsibility for at least 2 out of 3 major types of expenses – food, housing, and other expenses. The terms household or consumer unit are used interchangeably for convenience.

Differences in spending among metropolitan areas may reflect differences in the cost of living, but they also may reflect other causes. Spending differences may result from different consumer preferences or variations in demographic characteristics, such as household size, age, or income levels. However, expenditure shares, or the percentage of a household's budget spent on a particular category, can be used to compare spending patterns across areas. Sample sizes for the metropolitan areas are much smaller than for the nation, so the U.S. estimates and year-to-year changes are more reliable than those for the metropolitan areas. Users should also keep in mind that prices for many goods and services have changed since the survey was conducted.

A value that is statistically different from another does not necessarily mean that the difference has economic or practical significance. Statistical significance is concerned with our ability to make confident statements about a universe based on a sample. A large difference between two values may not be statistically significant, while a small difference could be significant; both the sample size and the variation among the values in the sample affect the relative error of the estimates.

For additional technical and related information, see www.bls.gov/opub/hom/pdf/homch16.pdf. Data for the nation, the four geographic regions of the U.S., and 18 metropolitan areas nationwide are available at www.bls.gov/cex/tables.htm. Metropolitan definitions used in the survey are available at www.bls.gov/regions/ce_areadef.pdf. The metropolitan area discussed in this release is Chicago-Gary-

Kenosha, Ill.-Ind.-Wis., which is comprised of Cook, DeKalb, Du Page, Grundy, Kane, Kankakee, Kendall, Lake, McHenry, and Will Counties in Illinois; Lake, Newton, and Porter Counties in Indiana; and Kenosha County in Wisconsin. Metropolitan area news releases for the Consumer Expenditure Survey are available at www.bls.gov/regions/consumerspending.htm.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; Federal Relay Service: 800-877-8339.
